KV 8090 Series

4x4 Pocket Door™ Slide

SPECIFICATIONS:

- 75-pound maximum per door.
- Designed to mount to side of case for vertical pocket doors.
- Maximum door dimension of 26” x 72”.
- Self-closing three-way adjustable geometric door hinge with single lever disconnect feature.
- Precision steel ball bearings.
- Ebony Black electro zinc-plated lacquer finish.

KV KNAPE & Vogt
Installation Instructions for
KV 8090 Series Pivot Door Slides

READ INSTRUCTIONS FIRST!

These instructions show how to install the KV 8090 Series Pivot Door Slide. Please note that improper installation may void the Knape & Vogt Limited Lifetime Warranty. To install the slides correctly, follow the enclosed instructions, use only KV hardware and make no modifications. If you have questions or need additional information, please contact Knape & Vogt customer service.

Typical Application
- Obtain appropriate hinge based on door thickness and operational requirements.
- Recommended maximum door dimension: 26” wide x 72” high. For some types of door construction where door center bow may be an issue, a third slide may be used (see fig. 11).
- Use recommended KV#8090P CR roller for panel door construction.
- Recommended maximum door weight: 75 lbs.
- Designed to be used on vertical doors only.

Step 1. Size the cabinet door
For typical inset door applications, the cabinet door should be sized to allow for 1/8” top and bottom vertical gap.

Step 2. Install hinge cups in cabinet door
Determine location of hinge hole centers. Layout the door cup holes from the top and bottom edges of the door, 2-3/4” from door edge to first hinge cup centerline and 3-3/4” from the centerline of the first hole to the centerline of the second inboard hole. Bore four holes at back inside edge of door following chart recommendations (chart 2) for bore diameter and edgebore distance based on hinge being used. Always bore on a test block first to verify hinge cup locations. Install hinges in door.

Step 3. Position slide channels inside case
- Locate the centerlines of the top and bottom slides 4-3/4” from the inside top and bottom surfaces of the case. Set back the slides from the front edge of the case the door thickness plus 1/4” (for inset door applications).
- Position the slide channels into the molded rack using the indexing pin on the back of the molded rack through the 1/4” dia. hole on the rear of the slide channel (fig. 3). Confirm that the slide assemblies are parallel to case edge and then mount the assemblies to the case side by driving screws through the slide assembly.
- A mounting screw must always be used in the frontmost slide hole (fig. 4)
- For face frame applications, the slide must be blocked out so that it is flush with the edge of the frame (fig. 10). The blocking should be cut to a width of 2-3/4”, and a length that matches the length of the slide for proper slide support.

Step 4. Prepare pinion shaft and gear assembly
Cut the pinion shaft to 4” less than the overall cabinet opening height. The shaft end must be clean and deburred to allow the hardware to slide on. Pre-assemble a pair of pinion gears, pillow blocks and bushings to the top and bottom of the shaft making certain that the gears are assembled with the marking labeled “This side up” facing upward. Insert the pillow block attachment screws into the pillow block to hold the pillow block and bushing assemblies together and then attach the locking cap to the top of the pinion shaft. (fig. 5)

Step 5. Install pinion gear assembly to slides
Pull the slide hinge brackets to the front of the cabinet so that they are in the locked or detent-out position. Attach the pinion shaft assembly to the slides making sure that the teeth in the gear assemblies line up properly with the teeth in the rack assembly. Tighten the pillow block attachment screws but do not overtighten. (fig. 6)

Step 6. Hang door and adjust hinges as required
Install hinged cabinet door to slide assembly in case. For installation ease, each hinge pair must be aligned together to the mating hinge bases and locked down simultaneously. Slowly open and close the door checking for proper operation and door alignment.
- Hinge screws will allow for adjustment of the door in all three directions. (fig 7)
- Horizontal adjustment screw—_adjusts door side gap clearance. Do not over adjust—this screw MUST NOT be tight.
- Depth adjustment screw—adjusts door face in and out (flush with case edge). Screw must be tight.
- Vertical adjustment screw—adjusts door up and down (top and bottom gap clearance). Screw must be tight.
VERTICAL DOOR HEIGHT = CASE OPENING MINUS .25” (6.3mm)

CUT SHAFT 4.00” (101.6mm) LESS THAN CASE OPENING

3.78” (96mm)

1.89” (48mm)

EDGE BORE DISTANCE (SEE CHART 2)

2.75” (69.9mm)

PINION GEAR ASSEMBLY
Step 7 Install guide rollers
Proper operation requires precise roller location – drill pilot hole for screw located from case edges as shown (fig. 8).
- Secure top and bottom guide rollers using flat-head wood screws supplied. Tighten screws firmly.

IMPORTANT: Roller assembly should not bind on door. Always install the 8090 Pivot Door slide using top and bottom guide rollers provided with slide. If roller is missing or lost, contact KV customer service for replacement – DO NOT substitute other rollers. When improperly installed, the slides could be damaged. Locate the rollers as shown.

* Center mounting holes only on 26", 28", & 30" sizes
** Door fully retracted into case
*** Add thickness of door to determine minimum

*Edge bore distances shown are approximate. Always bore a test block to verify hinge cup locations.
Limited Lifetime Warranty
Knape & Vogt Manufacturing Company guarantees its drawer slides and builder’s hardware products against failure or defects for so long as the purchaser or end user owns them. This warranty is void if any damage to the product is due to misuse, neglect, accident, improper installation or any uses contrary to the instructions accompanying the product. This warranty covers the cost of the defective part and not the cost of removal, installation or other incidental charges. The foregoing are the purchaser’s exclusive remedies. Knape & Vogt Manufacturing Company assumes no liability for special or consequential damages.

Replacement product may be obtained by returning the product, transportation charges prepaid, together with a receipt of purchase or other documents acknowledging the sale of the product to the Knape & Vogt Manufacturing Company, Attention: Customer Service Department.

The warranty set forth above is in lieu of any other warranties, express or implied, including warranties of merchantability and fitness for use.
